

SYNTEK

Vinventions, the worldwide market leader in co-extruded still wine closures, presents the new generation of its product Syntek **ECO** for basic wines. Syntek **ECO** provides reliable protection against leakage, cork taint, and other problems associated with low quality technical corks such as dust or crumbling in the wine.

The outer skin guarantees a perfect seal directly after bottling. Syntek's **ECO**'s price is set to reflect economic competitiveness associated with entry-level wines.

Syntek **ECO**, with its patented co-extrusion technology, offers the wine industry a low priced closure for wines currently sealed under poor-quality bark corks and agglomerates. The product will be offered in two standard lengths and one diameter with a generic artwork defined by Syntek.

	<i>ECO</i>
Diameter	23.5 mm
Length	36 mm 40 mm
Weight	4.1 g 4.5 g/cork
Density	Overall : 0.276 g/cm ³ Foam : 0.230 g/cm ³
OTR	0,008 cm ³ /day - 21 %
Extraction Force	140 N - 400 N

All Synteks are recyclable with other LDPE food packaging.
